

GMAT tutorial

Download GMAT from the link below:

<https://sourceforge.net/projects/gmat/>

To run a script you need to click on Scripts and Add Script. You can upload the sample scripts that are given with GMAT and are in the folder “samples” in the main folder “R2020a”. Let’s upload for example “Ex_Attitude_Spinner”. So you need to click on the script, and you will have the following

You only need to click on Save, Sync, Run and the information in the script are copied in the panel on your left, and the simulation starts running. You can use the red button to stop it, and the play button to restart. You can use the panel on left to modify the data for the simulation but if you want to save those information, you need to click on the save button before running the script. There you go, you should be able to run successfully all GMAT scripts including the example that I prepared.
